DNA Test Result: Clear

Explanation of DNA Test Result

"Clear" dogs have two normal copies of DNA. Clear dogs will not develop spongiform leucoencephalomyelopathy as a result of the SLEM mutation, although we cannot exclude the possibility they might develop spongiform leucoencephalomyelopathy due to other mutations they might carry that are not detected by this test.

The sample named here has been submitted to the Kennel Club Genetics Centre for research purposes and tested as such. The DNA sample has been retained for use in future research studies.

Result only applies to sample supplied.
Certificate shall not be reproduced except in full, with written approval of the laboratory.
Any deletions or additions made will invalidate this certificate.
